PROOF OF CONCEPT

THE GERONTE PROJECT

Streamlined **Geriatric** and **Oncological** evaluation based on IC **Technology** for holistic patient-oriented healthcare management for older multimorbid patients

GerOnTe is a 5-year research and innovation project (April 2021 to March 2026) funded by the European Union within the framework of the H2020 Research and Innovation programme. **The overall aim of GerOnTe is to improve quality of life – defined as well-being on three levels : global health status, physical functioning and social functioning- for older multimorbid patients, while reducing overall costs of care.** To this end, **GerOnTe** will co-design, test, and prepare for deployment an innovative cost-effective patient-centred holistic health management system, hereafter referred to as the **GerOnTe** intervention.

A harmonised health management system taking into account patient's diseases in a global way, and not individually, would improve care quality and patient quality of life, while decreasing costs

OBJECTIVES

INFORMATION

Gather the stakeholders and data needed for patient-centred and multi-actor complex decision-making process and management.

TOOLS

Develop Holis™ GV ICT tools for the GerOnTe intervention to be implemented.

METHODS

Socio-economical methods for evaluating the impacts of the implementation of the GerOnTe intervention.

DEMONSTRATION

Demonstrate in 16 study sites from three EU countries the feasibility and effectiveness of the GerOnTe intervention.

REPLICATION

Develop recommendations for the replication of GerOnTe best practices in all European health systems.

ENGAGEMENT

Engage all stakeholders by co-designing the GerOnTe intervention.
