GerOnTe is a 5-year research and innovation project (April 2021 to March 2026) funded by the European Union within the framework of the H2020 Research and Innovation programme. The overall aim of GerOnTe is to improve quality of life – defined as well-being on three levels: global health status, physical functioning and social functioning - for older multimorbid patients, while reducing overall costs of care. To this end, GerOnTe will co-design, test, and prepare for deployment an innovative cost-effective patient-centred holistic health management system, hereafter referred to as the GerOnTe intervention.

A harmonised health management system taking into account patient’s diseases in a global way, and not individually, would improve care quality and patient quality of life, while decreasing costs.
OBJECTIVES

1 INFORMATION
Gather the stakeholders and data needed for patient-centred and multi-actor complex decision-making process and management.

2 TOOLS
Develop Holis™ GV ICT tools for the GerOnTe intervention to be implemented.

3 METHODS
Socio-economical methods for evaluating the impacts of the implementation of the GerOnTe intervention.

4 DEMONSTRATION
Demonstrate in 16 study sites from three EU countries the feasibility and effectiveness of the GerOnTe intervention.

5 REPLICATION
Develop recommendations for the replication of GerOnTe best practices in all European health systems.

6 ENGAGEMENT
Engage all stakeholders by co-designing the GerOnTe intervention.
